Protein Sequence Searches - February 2005

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or members of the public who may encounter UniProt temporary accession numbers.

C; Comment: Secreted from mitogen-activated macrophages within 4-24 hours after induction
C; Comment: Secreted from mitogen-activated macrophages within 4-24 hours after induction
C; Comment: TNF-alpha and -bla (lymphotoxin) are the products of different genes closely
ut are produced by different cell types and have different induction kinetics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A;Title: A polymorphic variation in a putative regulation box of the TNFA promoter regid

A;Title: N-linked sugar chain structure of recombinant human lymphotoxin produced by CHC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           C;Comment: Secreted from mitogen-activated lymphocytes within 1-2 days after induction, while having no detrimental effect on normal cells. It can also act synergistically wit C;Comment: This protein and TNF-alpha (tumor necrosis factor) are the products of differal activities but are produced by different cell types and have different induction ki
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       of the gene for mouse tumor necrosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       C;Superfamily: tumor necrosis factor

```

tumor necrosis factor alpha precursor - rabbit
N;Alternate names: cachectin; TNF alpha
C;Species: Oryctolagus cuniculus (domestic rabbit)
C;Date: 10-Sep.1999 #sequence_revision 10-Sep-1999 #text_change 09-Jul-2004
C;Accession: A25454; A25451; JS0727

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  C;Comment: Secreted from mitogen-activated macrophages within 4-24 hours after induction out detriment to normal cells. It can also act synergistically with interferon gamma to C;Comment: TNF-alpha and -beta (lymphotoxin) are the products of different genes closely ut are produced by different cell types and have different induction kinetics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          182 YYIYSQTYFREQEEIKENTKNDKQMVQYIYKYT----SYPDPILLLMKSARNSCWSK-- 233

--- SUBUNIT: Homotrimer (Potential)
--- SUBCELLULAR LOCATION: Type II membrane protein (Potential)
--- IISSUB SPECIFICITY: Widespread.
--- SIMILARITY: Belongs to the tumor necrosis factor family.

Augments the ability of dendritic cells to stimulate naive T-cell

proliferation. May be an important regulator of interactions

between T cells and dendritic cells and may play a role in the

regulation of the T cell-dependent immune response. May also play

an important role in enhanced bone-resorption in humoral

hypercalcemia of malignancy.

-!- FUNCTION: Cyrokine that binds to TNFRSFIIB/OPG and to
TNFRSFIIA/RANK. Osteoclast differentiation and activation factor.
Augments the ability of dendritic cells to stimulate naive T-cell proliferation. May be an important regulator of interactions between T cells and dendritic cells and may play a role in the regulation of the T cell-dependent immune response. May also play an important role in enhanced bone-resorption in humoral hypercalcemia of malignancy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Isoid=035235-3; Sequence=VSP_006448; TISSUE SPECIFICITY: Highly expressed in thymus and lymph nodes, but not in nonlymphoid tissues and is abundantly expressed in T cells but not in B cells. A high level expression is also seen in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PTM: The soluble form of isoform 1 derives from the membrane form
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      by proteolytic processing. The cleavage may be catalyzed by ADAM17. A further shorter soluble form was observed.

alveolar mammary structures during pregnancy, resulting in death of newborns. Trance-deficient mice show severe osteopetrosis, with no osteoclasts, marrow spaces, or tooth enuption, and exhibit profound growth retardation at several skeletal sites, including the limbs, skull, and vertebrae and have marked chondrodysplasia, with thick, irregular growth plates and a relative increase in hypertrophic chondrocytes.
SIMILARITY: Belongs to the tumor necrosis factor family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SSEEMGSGPGVPHEGPLHPAPSAPAPAPPPA -> TP (in

Biophys. Res. Commun. 269:532-536 (2000).

-!- FUNCTION: Cytokine that binds to TMRRSF11B/OPG and to TMRRSF11A/RANK. Osteoclast differentiation and activation factor. Augments the ability of dendritic cells to stimulate naive T-cell proliferation. May be an important regulator of interactions between T cells and dendritic cells and may play a role in the regulation of the T cell-dependent immune response. May also play an important role in enhanced bone-resorption in humoral hypercalcemia of malignancy.

-!- SUBGLIULAR LOCATION: Type II membrane protein (isoforms 1 and 3); Secreted (isoforms 2). A soluble form of isoform 1 arises by proteolytic processing (By similarity).

TISSUE SPECIFICITY: Highest in the peripheral lymph nodes, weak in
spleen, peripheral blood Leukocytes, bone marrow, heart, placenta,
skeletal muscle, stomach and thyroid.
INDUCTION: Up-regulated by T cell receptor stimulation.
PTM: The soluble form of isoform I derives from the membrane form
by proteolytic processing. (By similarity). The cleavage may be
catalyzed by ADAMI?

Tumor necrosis factor ligand superfamily member 11, soluble form (By similarity). Cytoplasmic (Potential).

Signal-anchor for type II membrane protein (Potential).

Extracellular (Potential).

Cleavage (By similarity).

N-linked (GlcNAc. .) (Potential).

N-linked (GlcNAc. .) (Potential).

Missing (in isoform 3).

/FILG-VSP 006446.

Missing (In isoform 2).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         42 PAASRSMFVALLIGIGIGGVVCSVALFFYFRAQMD--PNRISEDGTHCIYRILRLHENADF

May be involved in cytotoxic T cell mediated apoptosis and in T cell development. TWFRSP6/FAS-mediated apoptosis may have a role in the induction of peripheral tolerance, in the antigen-stimulated suicide of mature T cells, or both. Binding to the decoy receptor TWFRSF6B/DcR3 modulates its effects (By similarity).
-i- SUBUNIT: Homotrimer (Probable).
-i- SUBCELLULAR LOCATION: Type II membrane protein (isoform FASL);

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Isoid=P41047-2; Sequence=VSP 006445;
-!- PTM: The soluble form derives from the membrane form by proteolytic processing (By similarity).
-!- DISEASE: A deficiency in this protein is the cause of generalized lymphoproliferation disease phenotype (gld). Gld mice present lymphopropathy and autoantibody production. The phenotype is recessively inherited.
-!- SIMILARITY: Belongs to the tumor necrosis factor family.
                                                                                                                                                                                                                                                                                                                                                       Fenner M.H., Shioda T., Isselbacher K.J.;

Transduces the apoptotic signal into cells. May be involved in cytocoxic T cell mediated apoptosis and int T cell development.

TNFRSF6/FAS-mediated apoptosis may have a role in the induction of peripheral tolerance, in the antigen-stimulated suicide of mature T cells, or both. Binding to the decoy receptor TNFRSF6B/DCR3 modulates its effects (By similarity).

Tumor necrosis factor ligand superfamily member 6 (FAS antigen ligand)
(Apoptosis antigen ligand) (APTL) (CD178 antigen).
Name=TWRSF6; Synonyms=APTLLG1, FASL;
Homo sapiens (Human).
                                                                                                                                                                                                                                                                                                            4 MEVQGGPSLGQTCVLIVIFTVLLQSLCVAVTYVYFTNELKQMQDKYSKSGIACFLKEDDS

Powntegulation of Fas ligand by shedding.";
Nat. Med. 4:31-36(1998).

-!- FUNCTION: Cytokine that binds to TNFRSF6/FAS, a receptor that transduces the apoptotic signal into calls. May be involved in cytotoxic T cell mediated apoptosis and in T cell development.

TNFRSF6/FAS-mediated apoptosis may have a role in the induction of peripheral tolerance, in the antigen-stimulated suicide of mature T cells, or both. Binding to the decoy receptor TNFRSF6B/DCR3 modulates its effects.

-!- SUBUNIT: Homotrimer (Probable).
